

A world map showing the distribution of the 'yellow' color across various countries. The map uses a color scale where yellow represents a specific value, with other colors like red, orange, and grey representing different values. The map is overlaid with a grid of latitude and longitude lines. The x-axis is labeled with -100, 0, and 100. The y-axis is labeled with 0, 20, 40, 60, and 80. The map shows that yellow is the dominant color across most of the world, particularly in North America, South America, and Europe. Other colors include red in the United Kingdom, orange in China and Australia, and grey in several countries in Africa and the Middle East.
